

New Intern Task — AI Track

Deadline: Monday, 6 July

Team Leader: Sibte Hassan

■ AI Track — Entry-Level Task

Data cleaning exercise on a sample dataset

Deadline: Monday, 6 July

Scope

- Given a sample dataset (CSV, ~500–5000 rows), identify and handle:
- Missing values
- Duplicate rows
- Inconsistent formatting (dates, text casing, units)
- Outliers or clearly invalid entries

Deliverables

- A cleaned version of the dataset.
- A short script or notebook showing the cleaning steps (Python/pandas preferred).
- A brief summary (bullet points) of what issues were found and how they were resolved.

Acceptance Criteria

- No data loss beyond what's justified and explained.
- Cleaning logic is reproducible (script runs end-to-end on the raw file).
- Summary clearly explains decisions (e.g., "dropped rows with >50% missing fields" or "imputed missing age with median").

For any questions, reach out to your team leader, Sibte Hassan.
